

# Norfolk County Mosquito Control District Weekly Report

Epi Week 36 (August 30 – September 5)

Report prepared by Kaitlyn O'Donnell

## Pools submitted:

<i>Species code</i>	PER	PRE	SAL
<i>Number of pools</i>	4	8	5
<i>Total specimens</i>	141	195	234

## Mosquito Activity:

Mosquito populations continue to decline, with the total catch dropping 35% from last week. *Cx. salinarius* remains the most abundant mosquito in traps this week, followed by *Cx. pipiens/restuans* complex. *Ps. ferox* and *Cq. perturbans* totals decreased further, each accounting for about 13% of the total trap catch. Total mosquito catch is lower during this week than in 2019, which holds true across all species collected except for *Cx. salinarius* and salt marsh species, especially *Oc. taeniorhynchus* which increased this week.
