

Norfolk County Mosquito Control District Weekly Report

Epi Week 38 (September 13 – September 19)

Report prepared by Kaitlyn O'Donnell

Pools submitted:

No pools submitted this week

Mosquito Activity:

Mosquito activity continues to taper off for the season, decreasing by 71% from last week. There were not enough mosquitoes to support pool submissions for this epi week. *Ae. vexans* was the most abundant species in traps this week, but *Ps. ferox* populations have crashed along with *Cx. salinarius*. *Cq. perturbans* totals nearly reached zero, only a few adults were collected from two sites. *Cx. pipiens/restuans* was the second most abundant species this week, collected in low numbers from gravid traps at most sites.
