

Norfolk County Mosquito Control District Weekly Report

Epi Week 39 (September 20 – September 26)

Report prepared by Kaitlyn O'Donnell

Pools submitted:

No pools submitted this week

Mosquito Activity:

Mosquito activity continues to decline, dropping 38% from last week. *Ae. vexans* was again the most abundant mosquito in traps, accounting for about 50% of the total mosquito catch. *Cx. pipiens/restuans*, *Cx. salinarius*, and *Ae. cinereus* were the next most abundant, each accounting for about 12% of total trap catch. There were not enough mosquitoes trapped to support submitting pools for testing this week.
