

Norfolk County Mosquito Control District Weekly Report

Epi Week 40 (September 27 – October 3)

Report prepared by Kaitlyn O'Donnell

Pools submitted:

No pools submitted this week

Mosquito Activity:

Total mosquito catch doubled from last week, though activity still remains low. We once again did not submit any mosquito pools for testing. *Ae. vexans* were the most abundant mosquito in traps this week, increasing by 53% from last week. *Cx. pipiens/restuans* complex were the next most abundant species in traps, consistently showing up in small numbers in most gravid traps. *Ae. cinereus*, *Ps. ferox*, and *Cx. salinarius* each accounted for about 8% of the total trap catch. This is the last official week of trapping for the 2020 season.
